Chapter # Topic Water pre-reading

Water Objective: Learn about the global problem of water quality and how chemistry can help us manage this problem.

Notes on topic Write three things you found interesting while reading the WHO fact sheet on water.

- 159 million people collect untreated surface water from lakes, ponds, rivers, and streams.
- By 2025, half of the world's population will be living in water-stressed areas.
- 842,000 people are estimated to die each year from diarrhoea as a result of unsafe drinking water.

Reading Citation "Drinking-Water." World Health Organization, World Health Organization, 7 Feb. 2018, www.who.int/en/news-room/fact-sheets/detail/drinking-water

Reflection:

Many people (including myself) take clean drinking water for granted, considering that 1.3 billion people have to drive to get clean water. These statistics are very sad, and I hope there is a way to improve them, I hope that by 2025 they will find a solution because it is really sad half our population will struggle to obtain clean water.
